EFF TOURISM
Environmental Footprint
of Fluvial Tourism

EFFT aims

• Decrease related-water tourism environmental footprint
• Share related-water tourism sustainable good practices
• Provide a set of skills to develop own sustainable initiatives and measures in their recreational activities, businesses and natural spaces
• Contribute to satisfy preservation need, protection and sustainability of natural spaces and water ecosystems
• Boost responsible behaviours and measures in the community, enterprises and visitors of these spaces and helping to reduce the waste and dumping as well.
• Help users improve their professional profiles and be more competitive, enhancing their employability.
• Lay foundations for new business opportunities, innovative professional initiatives, cooperation between entrepreneurs.
• Help users reduce activity's costs by being environmentally responsible and more efficient.

Self-Scan

Self-scan is an online tool to assess the level of sustainability of the fluvial tourism service providers who insert the data themselves during the scan. The analysis is based on a comparison of environmental indicators to define the environmental performance and management of its user. As a result it provides information of the level or state of sustainability with a generation of a certificate. It is available in English, Hungarian, Slovenian, Estonian, French, Polish and Spanish.
